Little details. Big difference.

We proudly manufacture all our products at our facility outside of Templeton, Iowa. That's how we're able to produce the highest quality fabric-covered buildings at the lowest cost of ownership throughout the lifespan of your structure. At Accu-Steel, we work hard to make sure every component is quality-constructed for optimum performance. No cutting corners. No compromises.

QUALITY CONSTRUCTION. LIMITLESS POTENTIAL.

Fully engineered Crossover buildings provide the versatility you're looking for.

Accu-Steel Crossover buildings combine the advantages of a rigid steel structure with those of a fabric-covered building. The result is a product offering unlike any other. Crossover buildings are ideal for virtually any application, from finishing cattle and feed storage to sports facilities and aviation hangars – and everything in between.

WHY CROSSOVER?

You get the strength and flexibility you need with low maintenance and less hassle. It's a smart financial investment you can feel good about.

Rigid steel structures offer stable frames, increased design customization, and open interiors with high side-wall clearances.

Fabric-covered buildings offer abundant natural light, lower energy costs, easy maintenance, better airflow, and faster construction at a lower cost.

With Accu-Steel Crossover buildings you can have it all!

Versatile applications

Accu-Steel Crossover buildings feature wide-open interiors for an unobstructed span of space. With consultation from your Accu-Steel representative, you determine the building specifications to get the size and clearance you need. The fabric covers on Crossover buildings are easy to maintain, don't rust, and provide reduced energy costs. You truly get the best of both worlds. Accu-Steel Crossover buildings are ideal for almost any application, including:

- Cattle and other livestock production
- Agriculture storage
- Salt, sand, and de-icing storage
- Recreational facilities
- Riding arenas
- Manufacturing facilities
- Service facilities

The Crossover advantages

- Customizable sizes with multiple configurations and optional eave system
- Primed or hot-dip-galvanized steel for corrosion resistance
- High-performing, durable polyethylene fabric options
- Individual bay Keder covers are exceptionally low maintenance and weather-secure
- High side walls for large door installation, machine clearance, and maximum storage capacity
- Ability to install conveyors, sprinklers, HVAC systems, lights, viewing platforms, sports nets, and more
- One of the best warranties in the industry

What is the Keder cover system?

Instead of using ratchets or straps to secure a single fabric cover, individual fabric sections are sewn around cords, creating "beads." The beads then slide into tracks that are attached to the beams, creating connections that won't wear, tear, or rust. With our exclusive eave tensioning system, adjustments are easily made from the ground. To see the system for yourself, visit asicoverbuildings.com/keder.
