Accu-Steel Cattle buildings create a dry environment with excellent air quality for feeding cattle while reducing animal stress and manure management costs. With labor-saving innovations, our buildings increase your daily efficiency and accelerate your time to market, while reducing bedding needs and minimizing weather risks. Our in-depth knowledge of this industry allows us to provide the right solution to best fit your operation — keeping you as efficient and profitable as possible.

Accu-Steel is able to offer multiple building profiles that are designed to your specifications and engineered to your local codes.

FEED YOUR PROFITS

A better environment for your cattle means better returns for you.

little details. Big difference.

• Dry bedding inside makes a comfortable spot for the pairs any time of the year and being under roof means cows and calves aren’t exposed to extreme heat. The building can be 10 to 20 degrees cooler in the warmer months.
• Very low weaning stress for calves
• Ability to create separate pen layouts for the cow/calf pairs
• Allowing enough space for each pair creates a safer environment for both
• Excellent ventilation still keeps air fresh and aid in preventing respiratory ailments
• Having the cow/calf operation under roof means there is no need to relocate the pair outside

Comfort

• Hot-dip-galvanized steel to meet ASTM A-527 standards
• Enduro-Loc fabric technology
• USDA/NRCS/EQIP compliant
• 3-way airflow
• Individual bay header cover system
• Dual eaves
• Exclusive eave tensioning system
• 20-year warranty

Foundation Options

• Concrete - precast blocks, cast-in-place, T-panels, L-panels, or Jersey barriers - Create a floor plan that will withstand the wear and tear from the cattle and machinery used
• Deep pit - Reduce bedding and labor costs while mitigating the risk of environmental impact. Suggested in 38’, 46’, and 50’ with either in the Cattle Advantage Series
• Cover existing foundation and feed apron - Option to add cover over your existing foundation, even on slopes
• Jersey - Jersey panels are attached below the front load and a concrete wall is constructed along the sides of the frame
• Other foundation options are available upon request

• All structures are engineered from the ground up to comply with your local codes and to accommodate your cattle operation’s needs

Accu-Steel provides a superior product to competitors; they’re the ‘Cadillac’ of fabric-covered buildings

FEED YOUR PROFITS

A better environment for your cattle means better returns for you.

Accu-Steel Cattle buildings create a dry environment with excellent air quality for feeding cattle while reducing animal stress and manure management costs. With labor-saving innovations, our buildings increase your daily efficiency and accelerate your time to market, while reducing bedding needs and minimizing weather risks. Our in-depth knowledge of this industry allows us to provide the right solution to best fit your operation — keeping you as efficient and profitable as possible. Accu-Steel is able to offer multiple building profiles that are designed to your specifications and engineered to your local codes.
Dual Eaves
- Eaves are wide enough to protect bunk from rain and snow
- 12’+ tall eaves allow for large equipment to pass underneath
- 6’+ eaves direct water away from building, bedding, and cattle
- Eaves maintain 3-way airflow, even when the optional curtain is closed
- Dual opening doors can be lowered from the top, allowing for airflow without wind chill

Keder Cover
- Exclusive eave tensioning system eliminates the need for ratchets, which can rust or fail
- There are no straps to tighten or wear
- Maintenance is minimal and can be performed from the ground
- Truss and cover connection is the most weather-secure in the industry

Narrow Ridge Vent
- Vent is designed to work with twin eaves to provide excellent air quality
- Ridge ventilation and dual eaves evacuate moisture without creating wind chill
- Rain entry is minimized, so bedding stays drier and lasts longer
- Vent, eaves, curtains, and dual opening doors provide ideal air exchange

Managed Environment
- Animals stay cleaner, drier, and healthier all year-round, resulting in less stress
- Deep bedding pack can reduce manure challenges and labor costs
- Feedlot runoff, dust, and herd health are easier to manage and control

Customize
- Ability to integrate robotic milkers and other new technology including an electric back-scratching device
- Create the floor plan and layout that works the best and most efficiently for your operation
- Add a manure scraper system to alleviate labor expenses
- Allow easy access alleys for feeding, cleaning, and bedding
