VERSATILE & FUNCTIONAL.

One building with multiple uses

Accu-Steel's open interior delivers a 100% usable area to shelter equipment or inventory required in your operation. Our elevated interior clearance allows you to maneuver and operate large, high profile equipment inside the building. Accu-Steel's temperature-neutral fabric and natural ventilation properties reduce interior heat build-up and prevents condensation in the building keeping everything undercover dry and protected. Whether used as a temporary jobsite facility or permanent storage space, an Accu-Steel building is a cost-effective and flexible alternative to a traditional machine shed.

Economical Alternative

- Cost effective temporary, mobile or permanent building solutions
- Naturally lit, no electrical lighting required
- Shorter pay back period (depending on your operation)
- Easily expanded to add more space
- Building permits are expedited with an engineered Accu-Steel building
- Low maintenance materials and design

Accu-Advantages

- Protection from mother nature's elements reduces maintenance and preserves equipment values longer
- 100% usable space – design delivers a barrier-free interior
- Tall side wall clearance allows large equipment operation inside the building
- Natural ventilation will reduce heat, condensation, and rust damage
- Eduro-Loc fabric cover prevents paint fade & tire rot
- Engineered to meet your specific location and needs

Strong and Long Lasting

- Cold rolled steel frame
- Enduro-Loc fabric cover does not rust or corrode
- Hot-dipped galvanized steel frames for maximum protection
- Industry leading, comprehensive 20 year warranty
- Strong enough to support conveyor systems and other accessories to the building.
